Retractable Roof System

# THE HAMPTON

The functional and innovative retractable roof system designed for large and small areas that require protection from the sun. The Hampton Retractable Roof System has been specifically designed for rooftop installations and is the perfect way to provide maximum shade protection over glass roofs, pergolas and skylights.

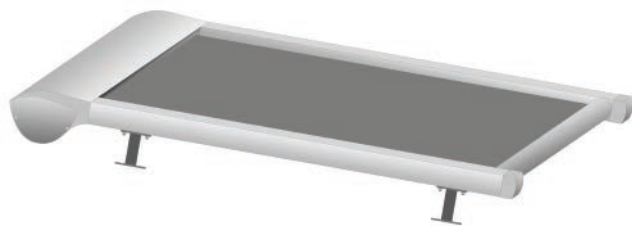

The Hampton Retractable Roof System is made from drop forged aluminium and stainless steel fixtures that have been developed to ensure smooth operation and high durability.

The system is projected by an integrated positive lift (power-spring mechanism in the roller tube), which tightens the skin in any position.

A stylish and compact full cassette head box protects the retracted system fabric and motor from adverse weather.

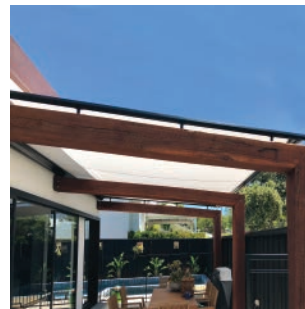

Custom made to suit each individual area with a large range of fabric and powder coating colour options.

Folding away at the touch of a button, the Hampton Retractable Roof System is powered by a Somfy motor.

Hampton Retractable Roof
